Dear DR/Prof Rowan Williams

Before you go on your summer holiday I would be grateful if you gave your attention to my letter and the enclosures.

It was some time ago that I formulated a hypotheses proving that the Virgin Birth of Christ cannot be falsified scientifically: drawing on: 1) Carl Poppers theory of falsifiability; + 2) the human biological procreational fact of partheno-genesis; + 3) instance of a human person who is fully male in form with male genital organs but has only X chromosomes in his body - as can be seen in the instance of the attached Daily Mail article , in which the medics may call this person a woman - but this allows for the possibility of role of God the Father in Christ`s procreation. The presence of Y chromosomes would have cancelled any possibility of the Virgin Birth of Christ.

You are best placed to refer this issue to a human procreation expert , a philosophy of Science expert , and you as a world class theologian from the theological perspective

Thank you for your attention.

God bless

Angelique Rockas
